

DEXION - VERTICAL STORAGE SYSTEMS

Vertical Storage Racking is used for storing timber, metal or plastic

Dexion's vertical storage system is ideal for vertically standing of long goods, such as tubes, sheets, pipes and timber. This allows quick and direct access to the stored materials

The vertical storage system is a multipurpose designed rack and can be customized to meet the customer's requirements when storing long goods. This set up is ideal for DIY stores as well as metalwork and woodwork stores. The storing of materials in this unit not only allows for clear visibility of stock, it also takes up less space than a conventional horizontal storage system.

Available as a single or double sided A-Frame, the racks are fully adjustable with the flexibility of separating different products or sizes using vertical dividers.

Slide your sheet material, plates, panels and other on-edge material into vertical storage racks. Sheets may be stored allowing high visibility and easy retrieval. Vertical storage rack provides safe, convenient storage while making inventory control easier.

Options for a standard vertical storage bay:

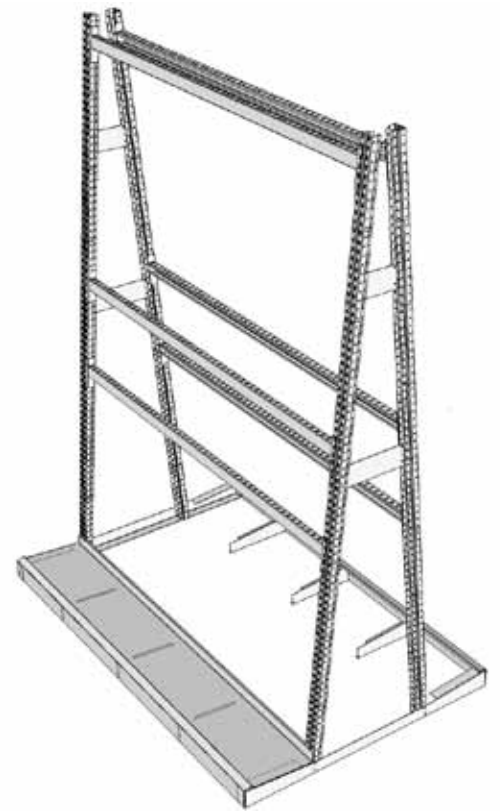

Clear span (C/S) options:

- 1850 C/S;
- 2750 C/S;

Height options:

- 2000 mm;
- 4000 mm.

The finish can be made either powder-coated or galvanized;
The number of dividers can be chosen by the customer. Dividers can be added at a 50 mm pitch.
